James Leffel & Co.,

SPRINGFIELD, OHIO.

The Great Carriage Manufacturing House of the World.

EMERSON, FISHER & CO.

CINCINNATI, OHIO, make a good, substantial Top Buggy for $100, and a strong, durable Phaeton for $140. The uniform excellence of these vehicles, resulting from carefully selected material and good workmanship, has given their Carriages a favorable reputation throughout the Union, in localities where they have been used for years by Liverymen, Physicians, Farmers, and others requiring hard and constant use, and has made the firm of Emerson, Fisher & Co. the acknowledged leading

CARRIAGE BUILDERS

of the American Continent. These Top Buggies are in every State from Maine to California, and from the Lakes to the Gulf, and hundreds of testimonials have been received from every part of the country evincing the entire satisfaction of purchasers. Upwards of

85,000 CARRIAGES

manufactured by Emerson, Fisher & Co. are now in use, attesting their great and merited popularity, and in order to meet the demand which has increased year by year, the facilities of their mammoth establishment have recently been extended, enabling them now to turn out in good style, during the busy season, about

400 CARRIAGES A WEEK.

The unequalled facilities of this firm enables it to produce good Carriages at a far less cost than the work of small makers in country wagon shops, and that class are now purchasing largely of us to supply their local trade. Send for Illustrated Price List of Carriages.

LITERATURE OF THE DAY.

LOST TREASURES IN THE CARIBBEAN SEA.

In 1815, when Spain was exerting all her powers to suppress the revolution in Venezuela, the 1,000-ton line-of-battle ship San Pedro Alcantara was dispatched from the mother country, laden with ammunition of war, and treasure to pay the army in Venezuela, and the navy on the Spanish main.

She had on board, as proved by the records preserved in the state archives in Madrid, $2,000,000 in gold coin, packed in iron chests, and $3,000,000 in silver, packed in wooden chests.

When the vessel arrived off La Guayra, the insurgent forces were threatening Caracas, and the frightened merchants and clergy, fearing a sack of the city, hastened to place their wealth in the treasure-hold of the San Pedro Alcantara for safe-keeping. Bullion, gems, church ornaments and jewels, roughly estimated at $1,000,000, were thus added to the riches already aboard.

The San Pedro Alcantara sailed from La Guayra to off the southern coast of the Island of Margarita, where she anchored between Cache and Cabagua, small islands to the south of Margarita. During a revel among the sailors a fire was started by the upturning of a bowl of blazing punch, the flames communicating with a barrel of brandy.

It is said the dry wooden vessel was speedily enveloped, and the fire soon became uncontrollable, until it reached the powder-magazine, when a terrible explosion took place, shattering to fragments the after-half of the vessel, scattering far and wide over the waters the wealth of her treasure hold, and sacrificing the lives of 700 out of 1,000 men.

All the foregoing is a matter of history, established by undoubted authority; that remaining to be stated is a matter of knowledge to living witnesses.

In 1864, a company, in Baltimore, undertook to recover the treasure. They worked three months on the wreck of the forward half of the vessel, and recovered about $8,-000 in coin. The coin found there was only scattered silver dollars, stuck into the woodwork by the force of the explosion. Owing to the slow progress in recovering any of the treasure, many concerned in the expedition became dissatisfied with the way in which the wreck was worked.

Thomas H. Folingsby, one of the divers, advanced a theory to the superintendent that the force of the explosion had thrown most everything on the vessel aft. Other

After changing the location of the schooner, from which they worked a diving-bell, to the point indicated by Folingsby, they succeeded, after six months' works, in recovering about $300,000 in silver coin.

However, much more was recovered, as the divers secreted about themselves large sums of money. They also found jewels, of which they rendered no account. One man, in particular, picked up a diamond cross, which was subsequently sold in New York for $13,000.

Several of the divers finally took the long-boat and fled to La Guayra. They were, however, pursued and arrested; but, as they had counter claims for percentage, and the manager of the expedition was quite unpopular, the affair was compromised, and they were set free, the expedition returning to Baltimore to refit and set out the second time.

Owing again to difficulties between the superintendent and his divers, the expedition was compelled to return to Baltimore the second time and again refit.

The third expedition was equally unsuccessful. Owing to a change in the Venezuelan government, a suspicion of pretended distrust and deception in the matter of royalty was taken advantage of to annul the grant.

An expedition from Providence took some $40,000, but was believed to be dishonestly managed, and brought up in a row. Another small expedition got $18,000.

Another expedition, sent out by a well-known New York capitalist in 1878, failed through the incompetency of the captain.

The grant for exclusive working of the wreck for a term of six years, is now held by Mr. Folingsby, the diver, before mentioned as directing the movements in 1864, which led to the recovery of $200,000.

The ground to be worked is about two and one-half miles from shore, in an almost land-locked roadstead. The water is from forty to sixty feet deep; the bottom is sand, fourteen to thirty inches deep; at both ends of the road-bed there is very deep water, preventing, therefore, any accumulation of sand in the roadstead. The current is never more than two knots, which renders it an easy matter to work at the wreck the whole year.

It is proposed to dredge the entire bottom for a sufficient radius to take up everything thrown out by the explosion. Dredges, taking twenty-four square feet at each dip, have been tried, and work well. Experts contend that the iron chests containing the gold have afforded a solid bulk to the explosive force, and have consequently been thrown far off; while the silver buried from the busted boxes came down in a shower within a narrow radius, which accounts for the fact that only silver has been recovered.

—*Phila. Sat. Night.*

THE LITTLE ONES.

Yesterday an old man entered a Little Rock store, and taking from his pocket an old buck-skin pouch, he emptied two coins on the counter, and then, after regarding the silver for a few moments, said:

"Mister, I want to buy some goods to make a dress."

"That money is mutilated, old gentleman.

This twenty-five-cent piece has not had a hole punched. You see, they have been abused. I can't take them."

"Abused," said the old man. "Abused," and he took up the fifty-cent piece and looked at it tenderly. "And you won't take it on account of the holes. Heaven grant that I did not have to offer it to you. Years ago, when my first child was a little girl, I punched a hole in this coin and strung it around her neck. It was her constant plaything. At night when she went to bed we'd take it off, but early at morning she would call for her watch. When four John—you didn't know John, did you? No. Well, he used to come to town a good deal."

"Where is he now?" asked the merchant, not knowing what to say, but desiring to show appreciation of the old man's story.

"He was killed in the war. I say that when John was a little boy I struck this quarter around his neck. One day his watch got out of fix, he said, and he filed these notches in it. He and his sister Mary—that was the girl's name—used to play in the yard and compare their watches to see if they were right. Sometimes John wouldn't like it because Mary's watch was bigger than his, but she would explain that she was bigger than him, and ought to have a bigger watch. The children grew up, but as they had always lived in the woods they were not ashamed to show their watches. When a young man came to see Mary once, she forgetfully looked at her fifty cents. "What are you doing?" asked the young man, and when she told him she was looking at her watch, he took it as a hint and went home. After this she did not wear her watch in company. Well, Mary and the young man married. John went off in the army and got killed. Mary's husband died, and about two years ago Mary was taken sick. When her mother and I reached her house she was dying. Calling me to her bed, she said, 'Papa, lean over.' I leaned over, and taking something from under her pillow, she put it around my neck and said: 'Papa, take care of my watch.' The old man looked at the merchant. The eyes of both men were moist. "Do you see that boy out there on the wagon?" he said. "Well, that is Mary's child. I wouldn't part with this money, but my old wife, who always loved me, died this morning, and I have come to buy her a shroud." When the old man went out he carried a bundle in one hand and the "watches" in the other.—*Little Rock (Ark.) Gazette.*

THE CONVEYANCE OF STEAM.

The conveyance to long distances of steam has been a problem with engineers, and its use has, in many instances, been discarded for compressed air. In fact, the measure of the distance to which steam may be carried with economy is not yet determined. A suggestion is now made by which owners of establishments in which steam is largely used might effect a large saving by concentrating their boilers in one place adjacent to a railway station or to the shore, or even constructing a large central boiler, where their coal may all be landed and used without cartage, and thence distributing the steam to their several works. The difficulty has always been to find a coating for steam-pipes absolutely preventing the radiation of heat; and according to the *Boston Journal of Commerce*, such a covering may now be prepared. It is made of four parts of coal ashes sifted through a riddle of four meshes to the inch, one part calcined plaster, one part flour, and one part fire-clay. Mix the ashes and fire-clay together to the thickness of thin mortar, in a mortar trough; mix the calcined plaster and flour together, dry, and add it to the ashes and clay as you want to use it; put it on the pipes in two coats, according to the size of the pipes. For a six inch pipe put on the first coat about ½ inches thick; the second coat wants to be about half an inch thick. Afterward finish the outside with hard finish, the same as is applied to plastering on a wall.

A LONG OUTLOOK FOR THE HEIR.

An old farmer living about twelve miles west of Guelph died recently, leaving a will of which the substance is as follows: The son works the farm till his stepmother's death, at the end of which time he has to commence paying installments on $2,000 to the rest of the family at a yearly rate of fifty dollars a year, and when he gets all paid off he will get the farm in his own possession. It will be seen that after the stepmother's death it will be sixty years before the son gets the farm, and as the woman is yet in the prime of life and healthy, it is calculated she may live another forty years. The son is now thirty years of age, and when he can claim the farm, by this reckoning, he will be one hundred and thirty years old. The old man must either have thought life much longer than it is or else was afraid his boy might turn a spendthrift if allowed to get the property sooner. *Montreal Witness.*

The warblings of a Rochester canary which had delighted it mistress for nearly fourteen years have ceased forever.

Calling the hours by watches is a custom said to have had its rise in Germany.

Once get in the habit of looking over your things, and you will like it wonderfully. You will have the independent feeling that you need not wait for any one's convenience in repairing and making, but that you can be beforehand in all such matters.

A snappish cur must be tied short.

Stone is no sore.
